CAREER SUMMARY : Full Stack Web developer specializing in MERN stack technologies. Approaches to web development in a fashion that integrates mobile first and design thinking in order to create a website that manifests in enhanced digital experience for users and a robust website aligned to the client's business goals. Guided by a background in Biology, is intuitively capable of optimizing various design elements of a website's ecosystem to work together holistically.

TECHNICAL SKILLS :

HTML5, C SS3, JavaScript, jQuery, Java, Bootstrap, Node.js, React.js, Express.js, MongoDB, MySQL, Command Line, Git

TECHNICAL PROJECTS :

Google Books Search : <https://github.com/Islam4049/googlebooks1.git> | <https://google-books99.herokuapp.com/>

This application created using the MERN stack and allows users to search for books via the Google Books API. Search results are dynamically rendered in the UI and users have the option to save and/or delete books.

*Used Google Books API to retrieve books. * Technologies used: Node, Express and MongoDB.

Weather Dashboard: <https://islam4049.github.io/weatherdashboard/> | <https://github.com/Islam4049/weatherdashboard.git>

This weather app allows users to search for a city with current and future weather conditions for that city. Users are able to add to the search history and also retrieve the data when they visit the app again. The user can delete the cities from the search history.

* Utilized Javascript and JQuery to build the website . *Technologies Used: 'jQuery', 'API', 'HTML', 'CSS3'

Fitness Tracker - <https://github.com/Islam4049/workouttracker.git> | <https://aqueous-bayou-57929.herokuapp.com/>

For this assignment, I was tasked to create a workout tracker. This assignment required us to create Mongo database with a Mongoose schema and handle routes with Express.

* Used Google Books API to retrieve books * Utilised MongoDB for database to save books and also delete them.

* Technologies used: Node, Express and MongoDB.
